Wholesome Milk

Grand 78.

Eminent scientists and bacteriologists have proven that the awful death rate among children under 5 years is chiefly caused by contaminated milk; naturally the demands of the medical profession and the well informed in general are not only for a pure, rich milk, but a safe milk—that is, one that is guaranteed free from disease germs.

Science rightly proclaims that the only practical method of obtaining a pure milk supply is by perfect pasteurization; the process discovered by Louis Pasteur, the celebrated French scientist, and founder of the Institute Pasteur of Paris, France, the great est school of bacteriological research in the world. Statistics show that whenever this perfectly Pasteurized milk is used, child mortality has been greatly reduced.

Bridgeman-Russell Co.'s pasteurization is heat scientifically applied, according to Pasteur's own process to make pure, rich milk absolutely safe and wholesome. Insist on having Bridgeman-Russell Co.'s Pasteurized Milk in sterilized glass bottles.
